## TIF TRAVEL GRANT REPORT – ISPRS GEOSPATIAL WEEK 2019

Last month, I have awarded by the ISPRS Foundation (TIF) a travel grants to join the Geospatial Week (GSW) 2019, it was held from 10<sup>th</sup> to 14<sup>th</sup> of June at the University of Twente, Enschede, Netherlands and it hosted 13 workshops. It was great opportunity for me to attend GSW2019. It's an important activity in the area of Photogrammetry and Remote Sensing.

At the conference I held in oral presentation which titled “Soil moisture analysis using multispectral data in north central part of Mongolia” in the workshop of International Symposium on Spatial Data Quality, GSW2019. This opportunity allowed to share our research to this research community and get knowledge of different techniques and applications.

During conference, I had the great opportunity to knew researchers and connected with colleagues from other universities, who are working on my field of research. Also, I met esteemed professors of the ITC and University of Vienna who supported me on my research work. In addition, we met the students from the Design Lab of the University of Twente, and interacted between young researchers in from many countries (Netherland, Korea, China, Germany etc.,).

I would like to deeply thank people in ISPRS Foundation for Travel Grant, especially Professor John Trinder, representative of the TIF, who gave us the financial assistance and certificate in ceremony during the conference. This support made my first participation of ISPRS conference. I'm very happy to attended this conference. I hope in the future to attend this kind of conferences to see you all my friends and colleagues of GSW2019.

Your sincerely,

Enkhjargal Natsagdorj  
*PhD student*  
[Cartography & GIS](#)  
*Department of Geography*
