

----- Page 1-----

A method using Convolutional Neural Network for 3D Labelling challenge

Features:

- 1.Planarity
- 2.Sphericity
- 3.height above dtm
- 4.intensity

Step:

- 1.Using randomly 1/3 points in training area to train the convolutional neural network.
- 2.Using the trained neural network to label result points.

Address:

129 Luoyu Road ,State Key Laboratory of information Engineering in
Surveying,Mapping and Remote Sensing, Wuhan University, Wuhan, China
